

## Enabling Education through Technology

Whether an individual school or an entire school district's IT department requires assistance in keeping up with the newest innovations in educational technologies, increasing the reliability and security of its network and applications or managing the mobility explosion, JDL Technologies' team has a successful track record of enabling education through technology.

With over 200 campuses and more than a 100,000 computers, laptops and network devices in JDL's integrated community, it is clear that technology is not only a crucial element in enabling businesses, but also in the teaching and learning process. Through the management, monitoring and maintenance of some of the largest school districts across the country, JDL Technologies leads the pack in creating and managing customized IT solutions for school districts.

Since 1995, JDL Technologies has provided scalable and effective IT support for organizations, enterprises and numerous educational institutions. JDL's IT strategy has consistently involved complementing the school or school district's IT personnel with a JDL managed Network Operations Center (NOC) or a custom Managed Services package, shifting from a reactive model to a proactive approach to technology issues. This changed perspective enables constant monitoring and management to guide IT strategy through the rapidly expanding technology infrastructure needs of all growing schools and districts.

### JDL Technologies' Track Record in Education:

- Designed & integrated wired network for one of the largest school districts in the country
- Implemented a wireless deployment with over 9,000 access points across 250 locations
- Manages a NOC with nearly 300 remote locations measuring and monitoring wired, wireless and application usage
- Over 15 years of success with managed services, virtualization & network infrastructure in education

## JDL Ensures the Success of Technology Investments

Helping schools keep pace with constantly changing technology & its integration into the classroom

JDL Technologies brings over 15 years of directly related experience not only in large-scale educational solution designs and deployments in public and private school systems, but also in making sure that the technology inspires confidence in the educational community for reliable use on a daily basis. Through proper monitoring, management and continuous improvement processes by JDL, educational outcomes are directly improved in these areas:

- Reduced Direct Labor Costs
- Increased Customer Satisfaction
- Informed Decision Making
- Improved Vigilance

Dan Gesch, Director of Technical Services at JDL Technologies, commented on the innovation of technology in education, “The integration of technology into the teaching and learning process continues to march forward. Mandates for digital textbooks through SB 2120 are but one example of the new opportunities and challenges presented to school districts by emerging technologies; in this case, the mobility revolution. Supporting these new initiatives in today’s tight budget environments requires careful planning to ensure that the technology actually works for teachers and students.”

As Gesch mentioned, the successful implementation of any technology plan depends upon the dependability of the network, predictable performance and smooth operation of all support applications, servers, security and specialty devices. All too often in K-12 education or even private enterprises, this is not the case. However, with JDL’s Managed Services packages, NOC offering and staff in place, schools and entire school districts can relax in the knowledge that the technology always works and is consistently available when and where it is needed.

Along the horizon, JDL Technologies’ educational niche will continue to foster improvements and spur innovative technologies for students and educational professionals across the nation. The long-term data and trends found through JDL Technologies’ monitoring and managed services solutions will allow educational decision makers to create optimal technology strategies for the future success of their schools, students and educators.

***Let JDL Enable Your IT!***

A Leader in Customized IT Solutions for over 15 years. JDL’s portfolio of IT Services includes:

- Virtualization
- Managed Services
- Networking Services
- Converged Infrastructure
